SKILLS

- AI & LLM Development
- Full-Stack Software Development
- Systems Thinking & Problem-Solving

TECH STACK

Go · JavaScript
REST · SSE
OpenAI · Anthropic · Gemini
AI agent tooling

LANGUAGES

- English

PROFESSIONAL SUMMARY

Student developer with a strong interest in AI, software development and emerging technologies. I enjoy building things from scratch, experimenting with different AI models and turning ambitious ideas into practical projects. My main project is **Koda**, an AI-powered workspace I'm developing to bring multiple AI models and development tools together in one place. I'm always curious to learn, solve challenging problems and improve my skills in **AI & LLM Development**, **Full-Stack Software Development** and **Systems Thinking**.

EMPLOYMENT HISTORY

Entrepreneur / Independent Developer, Koda — Hyderabad

Aug 2026 — Present

Koda is a local-first AI workspace that brings multiple AI providers into one environment with shared project context, built in Go with an embedded web interface.

- Built an HTTP/REST API with Server-Sent Events for streaming responses.
- Designed provider adapters for OpenAI, Anthropic and Gemini behind one internal interface.
- Implemented session authentication, secret redaction before persistence, approval-gated tool execution, loop prevention and atomic JSON persistence.
- Wrote an automated test suite (18 tests at the last audit); static analysis and a security audit found an access-control issue in one endpoint, which I'm fixing.
- Redesigned the web interface and shipped Windows builds with tracked file hashes.
- Built with an AI-assisted workflow using Antigravity, Claude Code and Gemini: directing the agents, reviewing their output and verifying the results myself.

EDUCATION

JEE Foundation (Class 9), Allen Career Institute — Hyderabad

Apr 2026 — Present

- Building a strong foundation in Mathematics, Physics and Chemistry through regular classes and practice assessments.
- Balancing a structured academic schedule with independent software development and coding projects.
